

6 Week Course

Web Design using Dreamweaver

Aims:

For participants to further their knowledge of Dreamweaver from a basic to intermediate degree (please see below objective/key points for more information)

Objectives:

- Participants will be familiar with the Dreamweaver environment and the various panels
- Participants shall be able to utilise more advanced areas of the Dreamweaver program for example using site management tools
- Participants shall be able to create a website based on an intermediate brief on their own using the skills gained during the course
- Participants will be able to upload their website to a web space provider

Designed for:

Those who have little to no experience of using a website development tool. Especially suited to those who are able to navigate around the web but would like to contribute to it, covering areas that maybe relevant to their work with functions that are used in industry

Key points:

- Brief overview of file management
- Use site management tools to manage files
- Use and create templates to build sites more effectively
- Brief overview of storyboarding & basic project management using Gantt charts
- Test Websites
- Use graphics to create image maps
- Create data entry forms
- Upload a website to a web space provider
